**Classical Topology and Combinatorial Group Theory (Graduate Texts in Mathematics) (v. 72)** John Stillwell

In recent years, many students have been introduced to topology in high school mathematics. Having met the Mobius band, the seven bridges of Konigsberg, Euler's polyhedron formula, and knots, the student is led to expect that these picturesque ideas will come to full flower in university topology courses. What a disappointment "undergraduate topology" proves to be! In most institutions it is either a service course for analysts, on abstract spaces, or else an introduction to homological algebra in which the only geometric activity is the completion of commutative diagrams. Pictures are kept to a minimum, and at the end the student still does not understand the simplest topological facts, such as the reason why knots exist. In my opinion, a well-balanced introduction to topology should stress its intuitive geometric aspect, while admitting the legitimate interest that analysts and algebraists have in the subject. At any rate, this is the aim of the present book. In support of this view, I have followed the historical development where practicable, since it clearly shows the influence of geometric thought at all stages. This is not to claim that topology received its main impetus from geometric recreations like the seven bridges; rather, it resulted from the visualization of problems from other parts of mathematics—complex analysis (Riemann), mechanics (Poincaré), and group theory (Dehn). It is these connections to other parts of mathematics which make topology an important as well as a beautiful subject.

### **From reader reviews:**

#### **Kenneth Hand:**

Have you spare time for the day? What do you do when you have far more or little spare time? That's why, you can choose the suitable activity intended for spend your time. Any person spent their very own spare time to take a go walking, shopping, or went to often the Mall. How about open or maybe read a book titled Classical Topology and Combinatorial Group Theory (Graduate Texts in Mathematics) (v. 72)? Maybe it is being best activity for you. You understand beside you can spend your time with the favorite's book, you can better than before. Do you agree with the opinion or you have other opinion?

#### **John Charlie:**

Precisely why? Because this Classical Topology and Combinatorial Group Theory (Graduate Texts in Mathematics) (v. 72) is an unordinary book that the inside of the book waiting for you to snap this but latter it will distress you with the secret the item inside. Reading this book adjacent to it was fantastic author who else write the book in such remarkable way makes the content interior easier to understand, entertaining way but still convey the meaning entirely. So , it is good for you for not hesitating having this ever again or you going to regret it. This excellent book will give you a lot of positive aspects than the other book get such as help improving your expertise and your critical thinking way. So , still want to hesitate having that book? If I had been you I will go to the reserve store hurriedly.

#### **Robert Harriman:**

Would you one of the book lovers? If yes, do you ever feeling doubt while you are in the book store? Aim to pick one book that you never know the inside because don't evaluate book by its deal with may doesn't work is difficult job because you are afraid that the inside maybe not since fantastic as in the outside seem likes. Maybe you answer can be Classical Topology and Combinatorial Group Theory (Graduate Texts in Mathematics) (v. 72) why because the fantastic cover that make you consider about the content will not disappoint a person. The inside or content is usually fantastic as the outside or even cover. Your reading 6th sense will directly guide you to pick up this book.

#### **Sandra Black:**

In this period globalization it is important to someone to get information. The information will make professionals understand the condition of the world. The condition of the world makes the information better to share. You can find a lot of sources to get information example: internet, magazine, book, and soon. You will observe that now, a lot of publisher that print many kinds of book. Often the book that recommended for your requirements is Classical Topology and Combinatorial Group Theory (Graduate Texts in Mathematics) (v. 72) this publication consist a lot of the information with the condition of this world now. This kind of book was represented so why is the world has grown up. The terminology styles that writer make usage of to explain it is easy to understand. The writer made some study when he makes this book. Here is why this

book ideal all of you.
